Subject: VDC RESEARCH

Dear Tony,

An agenda has been sent and both Ulrich and I are studying it by now. I will come back to you in the afternoon and will then be able to discuss with you a bit more than merely the headlines.

The meeting of the dioxin group discussed the recent findings of the supplementary experiment performed by ERGO under real-life conditions in one of their offices. As I have not yet received any protocol I can rely only on oral information by Dr. Anthony Tricker. The integrated (one week of sampling) results are distinctively lower than those found in the experimental chamber, however, not nil. The results have to be discussed within the WPA.

Meanwhile best regards,  
Helmut
